BUSINESS PROCESS MODELING DOCUMENTATION

Phase 1: Business Process Modeling — Methodology & Design Explanation

System Illustration: Subsidized Input Distribution (AgriTrack Cooperative System)

1. Overview & Modeling Tool

This document explains how the Phase 1 Business Process Model (BPMN) diagram for the Subsidized Input Distribution workflow was designed and constructed. The diagram illustrates the end-to-end operational, database, and analytics flow from the moment a smallholder farmer requests agricultural inputs to when Oracle database triggers execute and the analytics dashboard updates.

- **Modeling Tool Used:** draw.io (diagrams.net) using standard Business Process Model and Notation (BPMN 2.0) shapes.
- **Diagram Structure:** A single main Process Pool titled *SYSTEM ILLUSTRATION : SUBSIDIZED INPUT DISTRIBUTION* divided into four horizontal swimlanes representing each actor and system layer.
